

PWG Accents

GitHub discussion: <https://github.com/sanskrit-lexicon/PWG/issues/9> related to [accents.html](https://github.com/sanskrit-lexicon/PWG/issues/9)

Screenshots of PWG entries ([a](#), [anu](#), [aheLayant](#)), not headwords (aha/m, a\kzA, anu^) from scanned [pdf](#).

NB: Devanagari (= deva) display based on [Siddhanta-Calcutta](#) font has (not only) अ instead of default अ. It's closer to the "French" font used in the original Petersburg printed dictionary as well, see अ (pre-unicode because of funding issues, the scan's could be reproduced, only the specific udātta is lacking). [SLP1](#) samples found in [pwgxml.zip](#). On Cologne's website IAST = Roman Unicode in the output dropdown menu.

accent	SLP1	IAST	deva	scan
udātta ¹	aha/m	aham	अहम्	अहम्
anudātta ²	a\kzA	akṣā	अक्षा	अक्षा
svarita ³	anu^	anû	अर्नु	अर्नु
